## 👤 Experience

---

### Offensive Security Consultant

Company: WorkNest Secure (formerly Bulletproof Cybersecurity)

Duration: Oct 2023 -> Present

- Delivered web app/API, internal/external infrastructure, Wi-Fi, build configuration, thick-client security assessments.
- Conducted authorised social engineering engagements covering physical security, phishing, spear-phishing and vishing.
- Reported exploitable gaps in technical controls, user process and detection/response with practical remediation guidance.
- Built tooling for Nessus parsing, Burp Suite BChecks and internal automation used to reduce friction in manual testing/reporting efforts.
- Independently led client kickoffs, progress updates and debriefs, translating technical risk into business impact and remediation priorities.

### Security Consultant

Company: WorkNest Secure (formerly Pentest People Ltd.)

Duration: March 2023 -> July 2023

- Delivered web application, API and infrastructure security assessments for consultancy clients.
- Built tooling for Nessus evidence automation and firewall configuration review support.
- Supported sales/scoping calls by explaining testing requirements and estimating assessment effort.

### Penetration Tester

Company: Cybernite Intelligence Ltd.

Duration: June 2022 -> Feb 2023

- Contributed to a digital forensics assessment involving IT/OT infrastructure.
- Developed web/dark web crawlers and scrapers for client-facing intelligence platform.

## 🔧 Skills

---

- Active and Passive Reconnaissance (incl. OSINT)
- Exploitation and Reverse Engineering
- Privilege Escalation and Lateral Movement
- Security Tooling and Manual Process Automation
- Infrastructure provisioning and management (Manual and IaC)
- Social Engineering

## 📖 Training & Projects

---

### Current Training:

- OSCP, Zero-Point Security RTO 1 and ZephyrSec MAE (in progress)
- Zero-Point Security RTO 2 (planned)

### Previous Projects:

- TDF data format serialization/deserialization module in Go for protocol parsing and structured binary data handling.

## 🏠 Home Lab

---

Currently, my homelab consists of a one machine for development, another for locally hosted services, such as Forgejo and a server for hosting LUDUS, for cyber range practice (allowing me to follow the Build-Break-Defend-Fix mantra easier).
